

TEST PALN

Project Name	Flight Ticket Booking Automation
Application Under Test	BlazeDemo (https://blazedemo.com)
Module Covered	Flight Search, Selection & Booking Flow
Document Type	Test Plan
Prepared By	Pachava Anunya
Date of Creation	15-June-2026
Reviewed By	Navin CK
Approved By	
Version	1.0

Section	Details
Test Plan ID	TP_FTB_001
Test Plan Name	Testing of Flight Ticket Booking Functionality in BlazeDemo Application
Objective	To verify that users can successfully search for flights, select a flight, enter passenger details, enter payment details, complete flight booking, and receive booking confirmation successfully.
Application Name	BlazeDemo Flight Reservation Application
Module to be Tested	Flight Booking Module
Features to be Tested (In Scope)	• Application Launch • Departure City Selection • Destination City Selection • Find Flights Functionality • Flight Selection • Passenger Information Entry

	• Payment Information Entry • Purchase Flight Functionality • Booking Confirmation Validation • Screenshot Capture Functionality • Excel Data Driven Testing
Features not to be Tested (Out of Scope)	• Database Testing • API Testing • Security Testing • Performance Testing • Load Testing • Mobile Application Testing • Payment Gateway Validation
Test Strategy	Functional Testing, UI Testing, Navigation Testing, End-to-End Testing, Data-Driven Testing, Regression Testing, Automation Testing
Test Environment	Windows 10/11, Google Chrome Browser, Java JDK 17, Eclipse IDE, Selenium WebDriver, TestNG Framework, Maven, Apache POI, WebDriverManager
Entry Criteria	Testing can begin when: • BlazeDemo website is accessible • Internet connection is stable • Test environment is configured • Browser is installed • Selenium framework setup is complete • Test data is available in Excel sheet
Exit Criteria	Testing is completed when: • All test cases are executed • Critical defects are resolved • Test execution report is generated • Screenshots are captured successfully

	• Results are documented
Test Scenarios	• TC_01: Verify Application Launch • TC_02: Verify Departure City Selection • TC_03: Verify Destination City Selection • TC_04: Verify Find Flights Functionality • TC_05: Verify Flight Selection Functionality • TC_06: Verify Passenger Details Entry • TC_07: Verify Payment Details Entry • TC_08: Verify Purchase Flight Functionality • TC_09: Verify Booking Confirmation Message • TC_10: Verify Screenshot Capture • TC_11: Verify Blank Passenger Name Validation • TC_12: Verify Invalid Credit Card Number Validation • TC_13: Verify Expired Card Year Validation • TC_14: Verify Zip Code Numeric Validation
Risks and Assumptions	Risks: • Internet connectivity issues • Website downtime • Browser compatibility issues • Changes in application UI Assumptions: • BlazeDemo server is available • User has browser access • Test data is valid • Required dependencies are installed
Deliverables	• Test Plan Document • Test Cases Document • Automation Scripts

	• Excel Test Data File • Screenshot Evidence • Defect Report • TestNG Execution Report • Test Summary Report
Defect Management	Defects will be logged with Defect ID, Summary, Severity, Priority, Steps to Reproduce, Expected Result, Actual Result, Screenshot Evidence, and Status.
Tools Used	• Selenium WebDriver • TestNG • Apache POI • Maven • WebDriverManager • Eclipse IDE • Git
Conclusion	Flight Ticket Booking functionality will be tested thoroughly to ensure users can successfully search, select, and book flights. The automation framework validates end-to-end booking flow using Selenium WebDriver, TestNG, Apache POI, and Page Object Model (POM).
